1. Claims 43-44 are pending.
2. Applicant's election without traverse of Group I, claim 43 drawn to treating psoriasis or a TH1 associated condition with ID4 in the reply filed on 4-16-04 is acknowledged.
3. Claim 44 stands withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 4-16-04.

4. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

5. Claim 43 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

The claimed invention is drawn to treating any TH1 associated condition or psoriasis with ID4. The scope of the claim is enormous, since almost all inflammatory reactions are TH1 mediated. So the scope of Applicant's claim encompasses treating any autoimmune disease and almost all types of graft rejections. To support such a broad claim Applicant's specification teaches that ID4 is an upregulated marker during IL-11 therapy in psoriasis. There is no recognition by the prior art that ID4 has a functional role during inflammation nor does the specification teach that ID4 is a critical link in inhibiting inflammatory cascade. There is no guidance as to how giving this marker in psoriasis patients would be useful in treating all inflammatory conditions, let alone psoriasis. In a review of the state of the art of Applicant's invention, The Merck Manual of Diagnosis and Therapy, it was not recognized that administering ID4 could treat psoriasis. In reviewing the specification there is scant guidance and no working examples demonstrating that ID4 could treat psoriasis or any TH1 associated disease. In lack of

such guidance that ID4 plays any role whatsoever in the pathology of all TH1 associated diseases the practice of the claim would be unpredictable and require an undue amount of experimentation to practice the invention as claimed.
